I've tried the solution of : It doesn't work, when i launch the game from the launcher i get the following error code: java.lang.Exception: Application launcher was not launched with Steam, more likely due to Steam startup problem Check your game logs for details. If you've recently updated the game it may take some time to load again after logging in. When i double click on the executable Steam opens the game. But this is not the desired solution. When i open the launcher i get the following error code: Couldn't start the Steam Runtime. It doesn't seem to fix the issue. My solution to fix this crash was the following: 1) I've reinstalled Steam, but it didn't fix it. 2) I've runned the game in the folder of it. 3) I've launched it from the launcher, and from the executable file of the game. 4) I've relaunched Steam (this was my mistake, I don't know why I didn't do this before). At I've reached the following solution: There was a Steam update that prompted a Steam restart. And after that, my game started working. I've left Steam running after that and I haven't had any problem with it. When the update was done, Steam opened without any problem. I hope it can help someone in the future. Automatic digitizer devices have had a wide use in computer systems for controlling various things. These devices digitize a two dimensional area by translating the position of a stylus or the like onto electrical pulses and converting the pulses into digital data. To aid the stylus in arriving at an exact position on the digitizing surface of the digitizer, the digitizer usually includes an optically reflective surface, such as a white paper surface, and a light source to illuminate the paper. The stylus is usually an elongated, pen-like device containing a light sensor, and a transmitter/receiver for transmitting the position of the stylus and a digital signal describing the position to a computer. The computer typically processes the position data to achieve a digital image of the area selected by the stylus. In most cases, a digitizer of this type is two dimensional, meaning 3da54e8ca3
